

CHRISTMAS CONCERT
STATEMENT RELEASED

Officials released the financial statement re the Christmas concert this week as follows:

Receipts	
Receipts at door	\$51.90
Expenditures	
Farmers Exchange	3.10
C. H. Nash	.75
Biders, Hardware	5.90
Crown Lumber	4.92
Shaw's Drug Store	10.00
Ritchie Hardware	2.87
Tree decorations	2.50
about 144	10.00
Total	40.34
Balance	41.50

The balance of \$41.50 was divided in half: the two lower rooms purchasing books for their respective libraries, while the share belonging to the two upper rooms was deposited in the Student's Union fund.

JULIETTE

CBC listeners are welcoming back to the nationwide airwaves a regular Juliette, whose new show is heard Thursday night on Vancouver. The golden-haired young vocalist is heard with "Calagie and Co." the Dominion News's smart new aggregation of fourteen sophisticated string quartets, who first gained national fame with George Calagie three years ago before he went overseas with the Air Force. Still in her teens, she first gained national fame with Alan Young's show from Toronto and is now a regular entertainer at Canadian and American night spots on the west coast.

COUPON CALENDAR

March 7—Super, 52¢, Meat M25.
Butter 11.
March 14—Meat M25.
March 21—Sugar 85¢, 84¢, Meat M25, Butter 14.
March 28—Meat M25.
Note—Butter coupons 116 to 129 expire on February 28, 1946.
Coupons still valid through March are Super R-84; butter R1 and R2 and meat M1 to M26.

If I know too much about what I have done, I won't have enough steam left for what there is yet to do.

NEW VOLUME 1: NUMBER 24

CARBON, ALBERTA THURSDAY, FEBRUARY 28, 1946

\$2.00 PER YEAR; 5¢ A COPY

Further Awards to be
Paid by P. F. A. A.

The council of the Municipal District of Kneeshill No. 48 held a regular meeting on February 21 in the municipal office, Three Hills. All members of the council were present. Approval was given to the leasing of business premises to several new businesses in various parts of the municipal district. A by-law authorizing the purchase of a site for an implement shop in Three Hills was passed on three readings and given.

Councillor Olson reported on the meeting held in Drumheller regarding the proposed home for aged and infirm persons. Notice was received from the P.F.A.A. branch of the department of agriculture, dist. P.F.A.A. awards will be paid on the 1945 crop in following areas:

Tp. 28, R. 22, Sec. 1-4, 9-16.

21-24 and 25-30.
Tp. 29, R. 22, Sec. 1-4, 9-16.
All of Tp. 30, R. 22.
All of Tp. 30, R. 24.
South 2-3 of Tp. 30, R. 25.
All of Tp. 31, R. 22.
Tp. 34, R. 24, Sec. 13-15, 22, 27, 34-36.

Notice was received that a joint committee of the department of municipal affairs and the department of education has been set up to consider the advisability of reorganizing municipal districts, and school divisions so as to provide a uniform unit rate in each municipal district. Also to consider the advisability of having one board administer all municipal school and hospital matters.

One application for an old age pension was approved.

IN MEMORIAM

Thurbon—In loving memory of my wife, Agnes May, who passed away March 1st 1941.

The depths of sorrow I cannot tell
Of the loss of one I loved so well
And while she sleeps a peaceful sleep
Her memory I shall always keep
—Ever remembered by her husband.

Pair To
Stand Trial

Laurie Brown of Drumheller and Frederick Johnson, no fixed address, were committed to stand trial at the supreme court sittings in Edmonton following a preliminary hearing before Magistrate Victor Hawkins on Friday. The pair are charged with breaking and entering the Oakes and Chickson wholesale tobacco company premises February 9, involving theft of \$750 in cash, a \$500 car bond and \$10 in war savings stamps.

A FORERUNNER OF EROSION

Pulsed soil, it is reported, is a forerunner of erosion. Experimental farms and agricultural institutions have demonstrated that soil drifting can be prevented by leaving the trash on top of the land. Farmers are advised to use only those types of machinery which will leave the trash on top and create a cloudy surface.

Full Value In
Coupon Shopping

Consumers are entitled to full value for their coupons when purchasing sugar or preserves, ration officials remind. For example, one sugar coupon used to purchase preserves is worth two 20 fluid ounce tins of canned fruit, or two 12 fluid ounce jars of jam. If the retailer sells only one tin of fruit from his stock he should make up the difference with either a jar of jam or the proper quantity of some other food such as honey, maple syrup or molasses, which will come under the combined ration plan.

THE HISTORY
OF WORLD
WAR IIPRICE
\$6.00

- Includes a three page military service record in color.
- Over 200 action pictures, maps and charts.
- Official photographs.
- Prepared under direction of 1 Francis Trevelyan Miller, noted historian of three wars.

EXCLUSIVE AGENTS
THE CHRONICLEC.G.I.T. EVENT
WELL ATTENDED

ACME—Marking C.G.I.T. week, the ACME group held a successful and enjoyable social evening in the school gymnasium. The event, which was well attended, realized \$25 towards the C.G.I.T. fund.

Man Charged
With Post
Office Theft

DUMHILLER—Alec Purk, of Edmonton, was committed for trial by Magistrate Victor Hawkins on a charge of breaking and entering the Wayne post office and stealing wrapping currency kept in the post office safe.

Postmaster J. M. States identified the currency and said he knew the wrapping because of his own way of wrapping the money. Photographs of the contents of a safe alleged to have been packed in front of the office were submitted as evidence.

The Crown alleged the trash shown in the photographs corresponded with those of a car Purk is alleged to have hired from a "do-it-yourself" firm in Edmonton.

STATES BAN DIVERSION
OF MOTOR REVENUES

Two more states have joined the list that have passed laws prohibiting the diversion of motor funds to other than highway purposes, according to information received by the Alberta Motor Association. These are Pennsylvania and Kentucky. More are expected to follow suit this year.

For many years the A.M.A. has urged that Alberta motor funds taken from the pockets of the not 1-4-4 of the province, should be spent on highway construction and maintenance. It has pointed out that the excess of revenues over road outlays runs in millions of dollars and it is high time that the practice was checked.

South of the international boundary the practice of raiding motor funds for general revenue purposes became so prevalent that finally state legislation was passed banning such diversions. This has had good results and should be adopted more generally in the provinces and states. It has been contended.

Three Weeks Course in
Farm Motor and
Machinery Repair

School Opens in Carbon March 11

Under present conditions with respect to all lines of farm machinery, tractors, etc., there is a limit to the amount of new equipment now available for purchase by farmers. As a consequence the owners and implement men in use on Alberta farms must give the maximum of service in order that our farmers may carry on and agricultural production can be maintained. Every farmer's present stock of equipment should be overhauled by spring in readiness for the season's work.

To assist in meeting this situation, the provincial department of agriculture offers a three weeks short course in the repair of farm motors and machinery to be held in Carbon commencing March 11. It will operate under the following provisions:

One instructor will be in charge and not more than 20 applicants will be accepted at each school. Young men from 16 to 35 years of age may be admitted.

Each person entering the course is required to pay a nominal fee of \$10.00. Applicants are responsible for their own lodging arrangements. In certain necessary cases, reimbursement may be made to meet part of the expense for board and room or for cost of gasoline and oil in travelling back and forth to the course. Receipts covering such costs must be presented.

at the close of the school before the grant can be considered. The Course of Training—

Entomologists Have Conducted A Successful Battle Against The Infestation of Grain Insects

THIS farm wife who is troubled with ants in her pantry or beetles in her flour barrel is not alone in having insect trouble. Sooner or later everyone who stores food is faced with the problem of protecting it from insects. Naturally the biggest problem falls to those who store the largest quantity of food such as the grain elevator operators who store millions of bushels of grain every year.

Few people viewing a grain elevator with its clean walls of thick concrete think of it as being subject to the invasion of insects, yet weevils, beetles and moths are sometimes busy at work within its bins eating furiously and multiplying as they eat. In grain elevators in certain parts of the Dominion, the Indian meal moth finds its way and lays its eggs in the bins of golden wheat. The eggs hatch and the larvae select their favourite food, the germ of the wheat which they grow on soon. The larvae of another pest, the rusted grain beetle, also burrows into the grain. The immature stage of the granary weevil is not so particular as it follows out the entire kernel, reducing it to a mere shell.

These troubles developed when Canada was at war and endeavoring to supply Great Britain with as much food as possible, when guns and tanks and planes sailed across the world with food for space on crowded ships. In normal times, the everpresent insects found little time to establish themselves in Canada's fast-moving grain stores, but the outbreak of war brought them piled up, affording an unusual opportunity for the insect.

During the past five years, H. E. Gray of the Division of Entomology, Dominion Department of Agriculture, and E. N. Smallman of the Board of Grain Commissioners, have been directing the battle against insects entrenched in stored grain. So successfully has been the work that the insects are now in retreat. In 1913, insect pests were found in a large percentage of grain stores examined by these government officials; by 1915, the infestation in these same elevators had been reduced to 10 per cent, and in many of the elevators it was practically impossible to find any living insects.

The entomologists began their campaign by recommending the use of insect control and showing the elevator owners and operators how to apply these methods. Their work was effective, but only to a degree. These two entomologists in the spring of 1915 invited grain elevator representatives to attend a short course in insect control, which was held at Montreal, Toronto, Fort William, and Vancouver. For four days each of these centres, a total of 200 representatives of 83 different grain storage organizations saw cultural films, listened to lectures, examined live and dead grain insects, and asked hundreds of questions.

When the course was over, practically every elevator company had assigned to one of its men the task of keeping its premises in such clean condition that insects could find it difficult to stay there. This activity has been carried out under the direction of the Dominion entomologist, and is responsible for the inspection and cleaning of the bins and carrying out of the grain and other sanitary measures. If severe infestation should develop, fumigants recommended by the entomologists are used. Several methods are available which are entirely harmless to grain and may be applied at the top of the bins and will penetrate to the bottom, killing the insects as they go. If the infestation is on the surface, as in the case of the Indian meal moth, the insects are destroyed by a fog-like spray of ten per cent. pyrethrum in a high grade oil or alcohol, on evaporation, leaves no trace on the grain. The knowledge of their value and the constant use of these modern fumigants and sprays, combined with good housekeeping practices, have largely eliminated the hazard of insect infestation. This work will be continued for the protection of Canada's grain wheat standards, to the mutual advantage of grain elevators, handlers, and consumers.

SIMPLE BUT SINCERE

One of the greatest tributes ever paid to Jean de la Rivière, the "Prince of Tenors," came at the end of a procession of his colleagues to his dressing room at the Metropolitan Opera House, New York, to offer their congratulations upon his successful reappearance after a year's absence through illness, who, thrusting a "merry hand of toil" into that of de Rivière's, exclaimed: "Jean, you done fine!"

SCATTER SEEDS OF KINDNESS

Do you wish the world were happy? Then remember day of kindness. Just to scatter seeds of kindness. As you pass along the way, For the pleasure of the many. May be offered traces to you. As the hand that plants an acorn Sifts the armies from the sun.

Largest of its kind, the white heron has a wing spread of nearly seven feet.

Record Flight

British Aircraft Sets A New Atlantic Speed Record

The record England to Rio flight by the British Lancanaster has marked the opening of Heathrow, London's huge new airport. The Lancanaster—"Star Light"—left Heathrow at noon on January 1 and arrived at Rio at 5:18 p.m. the following day, thus establishing a start to stop record for civilian flights between London and Brazil. Moreover, the journey of the Lancanaster included stops at Lisbon, Estoril and Natal. "Star Light" continued her flight to Montevideo and Buenos Aires.

The aircraft was piloted by Air Vice Marshal Bennett, pioneer of the Atlantic Ferry Service and founder of Bomber Command's Pathfinder Force.

Shortly before "Star Light" took off, the flight instructor, who was later "Civil Aviation" wished the pilot good luck. "This plane with its beautiful name 'Star Light' is a symbol of our country's determination to regain its place in the markets of the world and to use the air as a means of cultivating good relations with other nations."

The flight is one of the first of a series of trial flights planned by British Airways, which is building a pilot's experience of the route before the new, swift British Air Service between London and South America goes into regular operation.

The service will operate from Heathrow, which is now the main terminal airport for trans-Atlantic traffic.

At a cost of some twenty million pounds, when completed (next June), Heathrow will be built on a site of 3,000 acres, and will go into regular operation.

"DREAM WAC" TO GET FILM TEST—"Dream" W.A.C., who was signed one day by a producer in Washington's Pentagon building, and couldn't be located again for a month, is Maj. Jeanne Seaman. "Now she will have screen test."

Solar Energy

Claim That The Sun Supplies Light And Heat By Atomic Energy

Atomic energy as revealed in the sun which lights our skies is the subject of rather a profound editorial in this week's Chronicle. It gives one something to think about and is not those scientific terms which might bewilder the average layman reader.

The light is one of the first of a series of trial flights planned by British Airways, which is building a pilot's experience of the route before the new, swift British Air Service between London and South America goes into regular operation.

Makes Violins

Minister In Alberta Government Has Interesting Hobby

Hon. C. E. Gerhart is a busy man with responsibilities as a minister of two Alberta government departments—Agriculture and Forestry and Public Works and Municipal Affairs—but he still finds time to work at an unusual hobby. He makes violins.

Using tools like a jack-knife and hand plane, he has fashioned an instrument, his first, of wood specially imported from Europe, which surpasses in appearance and sound many violins displayed at high prices in music stores.

An American music expert appraised Mr. Gerhart's first violin at \$500. He has been working on the second, and other secret work during the war, the development of agents for biological warfare is possible in many countries, large and small, without vast expenditures of money.

There are hundreds more people with far more skilled hands than I have," he declared modestly, "yet so few seem to know that making a violin is comparatively simple if you have the tools and the patience."

The minister took up the pastime several years ago when, while in the army, he studied the art of violin making.

Since he was appointed a cabinet minister in 1942, the number of hours he can spare has been greatly decreased, but he still manages to make progress.

There are only a few violin makers in Canada and Mr. Gerhart is probably the only one who ever tackled the job.

He was very shy, and although he presented him with numerous opportunities for declaring his love in practical fashion, he could never manage to get over his shyness to take advantage of them.

They were sitting in the garden one evening, with the usual half-hour intervals between remarks, when the climax was reached.

"Isn't it funny," she said, "that the length of a man's arm is the same as the circumference of a girl's waist?"

"Is that so?" said he, mildly interested. "What do you say, if we get a piece of string and see if it's right?"

Report Reveals That Defensive Measures Were Prepared To Deal With Bacteriological Warfare

PLANNED to counter possible bacteriological warfare occupied Canadian, British and American scientists at the same time they were developing the atomic bomb, a Washington War Department statement revealed. This confirmed reports circulated a few weeks ago when Prime Minister Maclearen King, Prime Minister Attlee and President Truman were preparing for reconstruction of United Nations control of atomic and other mass killing implements of war.

The report was prepared by George W. Merck, head of a Rahway, N.J., chemical firm and consultant to the War Research on biological warfare.

It revealed that evidence indicated a definite idea in Japan that bacteriological warfare might be resorted to and that evidence existed to indicate the Nazis had played with the idea, but that Canadian-British-American joint preparations were well in advance of those of the enemy.

The joint study was made with the same secrecy as that surrounding atomic development and the details remain a secret. But the statement warned that the menace of bacteriological warfare must be considered by security planners and made these disclosures.

In studying methods of defending man, animals and crops it was necessary to investigate offensive methods and it was equally clear that the possibility of retaliation in biological warfare must be considered in the event such agents were used against the United States.

Methods and facilities were developed for the mass production of organisms and their products.

It was stated that no biological warfare agents should be produced in quantity without specific approval of the Secretary of War. The large stocks of these agents have been accumulated.

Expressing apprehension that hostile countries could develop in secret the means of fighting biological warfare, the report said:

"It is important to note that, unlike the development of the atomic bomb, the development of biological warfare agents for biological warfare is possible in many countries, large and small, without vast expenditures of money."

The construction of high production facilities. It is clear that the development of biological warfare agents is a very real process in many countries, perhaps under the guise of legitimate medical or bacteriological research.

"In whatever deliberations that take place concerning the implementation of a lasting peace in the world, the potentialities of biological warfare must be taken into account."

A note by the war department, attached to the report, said that intelligence reports from Japan, received after Mr. Merck had written his account, showed that Japan had made definite progress in biological warfare in developments that began in 1935.

Modifications of various weapons developed through research in their field-tested and field experiments were also conducted in the use of bacteria for purposes of sabotage.

The intelligence that Mr. Stanley Merck, who was married with one child, had been retained by the war department, showed that Japan had made definite progress in biological warfare in developments that began in 1935.

Health Program

Schools For Food Handlers To Be Launched In Saskatchewan

Director of the Division of Sanitation, Saskatchewan Department of Public Health. In collaboration with the Division of Health Education, he is completing arrangements, as part of a food sanitation program.

Many restaurants in Saskatchewan do not measure up to public health standards as to cleanliness, sanitation, protection of food and service," J. G. Schaeffer, director of the Division of Sanitation, states.

Mr. Schaeffer spoke of the two-day schools for food handlers to be launched by the Department of Public Health and said that the courses would give both proprietors and employees an opportunity to improve conditions and methods of serving the public.

Exposure of foods and tableware to dirt and vermin, and improper washing methods are among the chief sins of public eating places in Saskatchewan, the sanitation director stated.

Some places do not use hot water, and others wash dishes without washing powder or soap, he continued.

"Protection of the eating public requires sterilization of dishes, which may be done inexpensively and effectively by means of triple sinks, immersion in the germicidal solution, second for rinsing, the third for immersion in water kept at 170 degrees Fahrenheit," Mr. Schaeffer concluded.

Modifications of various weapons developed through research in their field-tested and field experiments were also conducted in the use of bacteria for purposes of sabotage.

* A "Welcome Home" to veterans will be held in the Scout hall on Friday, March 1st. It is regretted that attendance will be limited by invitation only. However the program following will be open to the public.

A re-organization meeting of the Duke of York Chapter, I.O.G.E.U., will be held in the Scout hall Monday evening. Officers were nominated and election will take place at the next meeting. It was decided by sponsor at "Welcome Home" dance in the Scout hall on Monday next, March 4th. Music will be provided by Hughes' Band orchestra. Carbon Veterans will be admitted free. All others 50c. Come along and have a good time.

Gus Chick was a Calgary visitor on Monday.

Carl E. Bell, C.W.A.C., has returned to Grimsby and will take up residence with her husband at the A. Walker homestead. It has been remarked that there has been a light in this firm ever since 1904 until the death of Mrs. Walker last fall. Thine 41 years.

* A number of citizens have not been contacted and requested to subscribe to the "Welcome Home" banquet because of lack of transportation for the canvassers. However, anyone wishing to contribute to this fund may leave their contribution with or Mr. Mackay at the bank or Mr. McLeod at the post office. A statement of receipts and expenditures will be published shortly.

Robert Reiswig's auction sale will be held at the farm on March 14th. Terms cash. N. Bown, auctioneer. See posters for further particulars.

George Meese was a Calgary visitor this week.

"Happy Go Lucky" is the show booked for the Scout hall next Thursday, March 7th. Stars are Mary Martin, Dick Powell, Betty Hutton, Eddie Bracken and Rudy Vallee. It is filmed in Technicolor.

Weather permitting there will be a carnival at the local rink on March 30th. Watch for posters.

Place your order for a copy of The History of World War II at the Chronicle Office. See advertisement elsewhere in this issue.

ADVERTISING COPY BY
TUESDAY PLEASE

Advertisers are requested to have their copy ready by Tuesday noon on the week of publication. Your co-operation will be appreciated.—Ed.

ROCKYFORD

If Stine left for Calgary this week where he has secured employment.

The Rockyford hockey team defeated Beiseker 3-2 recently. Goals were scored by R. Morgan, J. Hym Becker and J. Macleod. D. Hymman picked up a brace of assists. Beiseker goal keepers were Clarence Metzger and A. Campbell.

There will be a big dance in Rockyford on March 1. Music by Calgary orchestra. Sponsors are the Student's Union and Junior Red Cross.

Rockyford hospital scheduled for February 25th was postponed until the weather changes.

Just Boy

After a male baby has grown out of long clothes and triangles and has flannel pants, socks and so much dirt that relatives do not dare to kiss it between meals, it becomes a BOY. A boy is Nature's answer to the false belief that there is no such thing as a perpetual motion. A boy can swim like a fish, run like a deer, climb like a squirrel, talk like a mule, yell like a bull, eat like a pig or act like a jackass, according to climatic condition.

He is a piece of skin stretched over an appetite. A nose covered with a smudge. He is called a tornado because he comes at the most unexpected times, strikes at the most unexpected places, and leaves everything a wreck behind him. He is a growing animal of expectative promise to be fed, clothed, kept warm a joy forever, a periodic nuisance, the hope of a nation. Every boy born is evidence that God is not discouraged with man.

* Were it not for boys newspapers would go unread and the picture shows and candy stores would go bankrupt. Boys are universal running errands. A boy can easily do the family errands with the help of five or six adults. The rest with which a boy does an errand is equalled only by the speed of a turtle on a July day. The boy is a natural spectator. He watches parades, fires fights, ball games, automobiles, hosts airplanes with envy (never but will not touch the stick). The man who invents a clock that will stand on its head and sing a song when it strikes will win the undying gratitude of millions of families whose boys are forever coming to dinner about supper time.

Boys faithfully imitate their dads in spite of all efforts to teach them no manners. A boy if not washed too often and if kept in a cool, quiet place after each accident, will survive broken bottles, barrets, swimming holes, fights, and nine helpings of pie.

Sweet Young Thing—What shall I do? I'm engaged to a man who just simply can't tear children. Grandma—Well, you men's expect too much of a husband.

Beaver Returns

Here is the new Canadian Pacific Railway Company card on which the letters, symbols of the Dominion which the Confederation Line has served so long, reappear after a 17 year absence. The change in the company's trademark for use in all departments in the country is already being announced by J. C. Coleman, the chairman and president.

WARN OF MANY LURKING DANGERS AT CROSSINGS
The steadily mounting toll of traffic accidents at level crossings has drawn from lawmakers an official of the Alberta Motor Association.

Prospects of heavier traffic on streets and highways this year, following the suspension of gasoline and tire rationing, make it all the more necessary to observe safety measures at level crossings.

Hardly a week goes by without a report of fatalities at a level crossing. In practically every case at least two or three persons are killed or seriously injured.

Safety officials emphasize the need of local organizations drawing public attention to the hazards of careless driving over these crossings.

The railways have carried on educational programs but there still is need of creating greater public interest in the hazards of level crossings. The old cry to "Stop, Look and Listen" never had more cause for diligent observance than it has now and will have to this first postwar year when a greater increase of motor traffic will be on the highways.

SUMMARY OF FLOUR MILLS IN CANADA

Over Two Hundred Mills Located In Various Provinces

A total of 220 mills with machinery for the production of wheat flour in Canada were listed in 1945. Of that number (29 in Ontario) did not use the four milling machinery but operated as feed plants only, while ten in the western provinces were closed or idle. A summary of flour mills in each province of Canada shows one mill in Prince Edward Island with a capacity of 30 barrels per 24-hour day; two mills in New Brunswick with 140 barrels; four mills in Quebec with 9,320 barrels; 110 mills in Ontario with 40,541 barrels; 27 mills in Manitoba with 10,955 barrels; 30 mills in Saskatchewan with 12,840 barrels; two mills in Alberta with 12,280 barrels; two mills in British Columbia with 100 barrels—all per 24-hour day.

Capacity figures shown against each mill represent in the majority of cases the rated capacity in barrels 155 pounds each, per 24 hours of operation. Thus, the 220 mills listed could in a single day, working three shifts of eight hours each, produce a total of 85,250 barrels of flour. But this rate of daily output could not be maintained throughout the year in view of Sundays, holidays, breakdowns, and stoppages necessary for the overhaul and repair of machinery. Many of the mills estimate that they could maintain their normal capacity for 300 days or more in the year; others estimate between 200 and 300 days, while other mills indicate a maximum of less than 200 days annually. The average would appear to be in the neighborhood of 265 days per year and would represent an output of 27,174,750 barrels of flour every year. In the history of Canadian milling, wheat flour production has risen steadily from 1930 to 23,664,403 barrels for the crop year ended 31st July, 1940.

Things Beyond Price

Out of The Savagery of War, People Have Emerged With Faith In Life

It is comparatively easy in the troubled and discouraging days that have followed the closing of the year to believe that peace was hardly worth achieving because so little apparent change had come to our world. There are still wars and rumors of wars, still bitterness and poverty and hate. That is not beyond understanding. It is only our sudden enthusiasm, the relief from the immediate pressure of war, that directed us into overlooking the long, long road that must intervene before the shining peace can come.

So the hearts of a multitude of people, dependent on many measures, must have leaped with a new courage at the stirring words of the King's Christmas message. "To victory," he said, "much that was of great price has been given up; much has been ravaged or destroyed by the hand of war. But the things that have been saved are beyond price. It is a simple matter to destroy, and one with no great implications. But it is a simple matter to destroy many simple and great truths need reiteration. Many people, with their eyes fixed on the immediate war, have forgotten or overlooked what has been saved. They needed the simple reaffirmation that peace was not too high for the accomplishment."

A great evil has been cast from the earth. Perhaps even that has not resulted in the perfection of that better world for which we hoped. But, however it may fall short of the ideal, it does not fall back to the black days of 1939, when all the world trembled at the threat of that great evil, an evil way of thought that was poisoning a world. It does not fall back to the later years of war, when the threat became a staggering and brutal reality.

We have saved our belief in freedom, in the right to live and work and think and worship without threat or fear. We are beginning to think of a world beyond our nation's borders. All this may be imperfectly exemplified in practice. Perhaps we were too ready to believe that the high and selfish thinking of our days of trial could be carried on unchanged into the days of returning peace. But this at least can be said. We are confident and optimistic now over failures that a few years ago would hardly have recognized. That is the stirring of a sense of universal brotherhood. It is not free of selfishness, or self-seeking, or national prejudice, or predatory aims, but it is there, a science speaking to us of the idealism of the days of sacrifice. It is a conscience that no selfishness in the world can still, because it is stirring in too many hearts.

Out of the savagery of war, people have emerged with a faith in life and a confident and unshakable hope that not all the arguments of the tired thinkers can destroy. To the King challenged youth to bring to the making of this new world their own spirit of devotion and daring.

You have known the world only as a world of strife and fear. Bring now all that spirit to make it one of joyous adventure, a home where men and women can live in

Most Actresses' Sense Of Style Said To Be Appalling

Rosalind Russell is one of the few exceptions, says a famous Hollywood fashion designer who claims that most movie actresses are poorly dressed.

Lost And Found

Carless People Leave Articles Of All Kinds In Theaters

Ushers patrolling New York's Radio City Music Hall after the show recently spotted a hand bag, a portable radio, and a loaf of bread among the vacant seats. Another theatre turned up an emerald coat, a glass eye and an Angkor kitten in a bag. One million articles, more or less, are lost every day.

Usually, the items are an index to the character of the theatre's patrons. The theatre in a resort town often recovers jewelry. A theatre located near a high school overflows with articles like, hobby box and college glass. Romantic films leave a residue of perfume handkerchiefs. While war movies yield a rackful of men's hats and boys' caps. A Jersey City theatre has a pair of unlabeled slippers left during the showing of "The Song of Bernadette."

Oddly enough, about 50 per cent of the articles are never called for. They are usually held for 30 days, and then given to the theatre's charity. The Music Hall, however, has been waiting more than a year for the owners of three ladies' coats and five men's overcoats.—This Week.

Idea Is Wrong

People Who Work On Farms Are Definitely Not Inferior

The old notion of the inferiority of agriculture still lingers among ignorant people who still talk of "hicks" and "haysides" and in the poorer kinds of moving pictures, in which the farmer is pictured as a grotesque figure with his trousers held up by a suspender. That false notion also underlies the criticism that our exports of farm products are in some way inferior to those of the factories. There is as much skilled labor on the farm as in the factory, and just as much unskilled labor in the factory as on the farm.—Gulf Mercury.

RAPID GROWTH

In the 52 years since its first successful commercial production, rayon has grown so rapidly that its world consumption exceeds that of wool, is 13 times greater than silk, and is surpassed only by cotton.

mutual trust and walk together as friends. Do not judge life by what you have seen of it in the grimness and the waste of war, nor yet by the confusion of the first years of peace. Bring to it your courage and your hope and your faith.

For our better world we have these things that have been saved that are beyond price, while to solve our remaining problems what more is needed than courage and hope and a sense of humor.—Liberty Magazine.

India is so-called because a Sanskrit word "sindhu" was corrupted into Indus for the Indus river.

An Experiment

Atomic Bomb Test Will Pit Future Of World Navies

A \$100,000,000 test this spring of the atomic bomb's effect against warships will determine the whole future of the world's navies. Rear Admiral Russell S. Berkey of the United States navy, predicted.

Admiral Berkey, chief of the navy's civil liaison section, said the test would be of such magnitude that it would be the equivalent of the attack and occupation of Okinawa. The \$100,000,000 figure is his own estimate.

"The scientists have calculated," he told a reporter, "that the bomb's greatest effect on shipping may be reached when it is exploded a mile and a half under the sea."

"If exploded higher, it may create merely a localized eruption."

Plenty Of Markets

For Most Canadian Daily Products This Year

Although conditions may change rapidly, indications are that there will be plenty of markets for most Canadian daily products during this year. W. C. Cameron, chief of the dairy products grading and inspection service in the Federal Department of Agriculture said.

In a speech prepared for delivery at the annual meeting of dairy farmers of Canada Mr. Cameron said that planning for this year should be done with the knowledge that conditions have been changing and may continue to alter rapidly with the result that trends which today may seem to be reasonably sure may tomorrow be uncertain.

"REFUGEE"

Not one of the famous pyramids of Egypt, tombs of pharaohs, escaped plundering by the ancient tomb robbers.

—Smith in the Lynchburg News

BRITAIN TO MAKE CHANGES IN ROADS

Designed To Bring The Traveller In Sight Of Beauty Spots

German "auto-bahnen"—wide, straight, concrete-surfaced highways reminiscent of the Roman roads which left their mark in Britain—will not serve as a model for this country's post-war system.

A. J. Hughes, Minister of War Transport, discussing road improvement in the House of Commons said: "Our roads must be redesigned to enable the motorist, cyclist and hiker not only to reach their destination safely, easily and in comfort, but to enjoy every moment of the journey."

This involves preservation of the amenities, with sweeping curves that bring the traveller in sight of beauty spots, the continued passage of roads through some romantic villages instead of bare countryside; the planting of shrubs along the highways and a firm determination to avoid choosing road sites by drawing a straight pencil line on a map between two points.

Mr. Barnes, with these qualifications in mind, received house approval of a trunk road bill. In 1930 the trunk roads act transferred to the national government the responsibility for 445 miles of road and the new bill adds to the existing 2,695, including 734 miles in Scotland. Before 1930 responsibility for the roads was vested in a large number of local highway authorities with inevitable difficulty in maintenance, improvement and extension.

The new bill empowers the minister to make substantial changes in road design, to alter the route to increase the safety and convenience of their journey with a trunk road, construct bridges or tunnels over or under navigable waters and take responsibility for the condition of bridges on the trunk roads.

The trunk roads under national control represent only a small fraction of the British road mileage—180,000—and some members said in debate they believed the government should take charge of a far greater share. They noted an estimate that these roads would be carrying 12,000,000 motor vehicles by 1963. The government must enforce some uniformity in surfacing, and the roads often found themselves in a shambles because of the condition of the roads.

Mr. J. H. Turton, Conservative member for Thirsk and Malton, objected to any suggestion that roads should be allowed to meander.

"I see it, the modern road, the trunk road, is not the road our ancestors made, that dived from village to village, and which, if now used as a trunk road, congests traffic, and does not succeed in bringing the produce from the factory to the post quickly," he said.

Cannot Be Maintained

High Wages During War Were Paid On Borrowed Money

Those who stayed on the home front during the war were told that the duration since to insist the more normal requirements of supply and demand. There is no sense in insisting that the cost of living should continue wages during the war he made certain to make them now. And wages have time properly every money. We cannot go fifty years further in debt every year in order to have war time prosperity every year. Government debts are our debt and we work two days out of six to pay them on. War wages are looked at in an impossible angle. It is the same as the "profit system" which is a profit-and-loss system in fact.—Brandon Star.

The Winter Stars

Lift Your Eyes To The Skies And Find New Beauty

There is pleasure even in gazing at these twinkling jewels in the picture of their colors. Some burn blue-green, like diamonds in the sun. Others are stars with a brilliant amber and some glow in pale rose. There is color and seeming movement to these winter stars. They are clear air. To the untold they offer a child's delight, untrammelled by weighty studies. It seems so difficult that they are there and shining. And when you lift your eyes to the stars find a new beauty of spirit that is not given to those who have their eyes to the ground.—Victoria Times.

SHORTCOMINGS

The master of the house, exasperated beyond endurance by the cocked head and the up before him. After a long trudge upon her shortcomings, he pointed to the table.

"Look at this piece of bacon I've served to your mothers," he said. "Absolutely perfect! And this piece I've taken myself isn't much better."

Napoleon had a daily bath in cologne mixed with water.

The world's first oil well was drilled in 1859.

Will Be Welcome

Canadians May Once More See World Famous Circus

The news from Hamburg, circus capital of Europe, that Hagenbeek's world-famous circus is being reorganized and plans to be back on the road in April is a reminder that it is 10 years since the "big top" has made its appearance in Canadian cities due to war conditions. No doubt the circus parade with its funny clowns, lumbering elephants, dancing horses and exciting calliope will be back this coming summer.

Youngsters—and many older too—will look forward with delight to seeing the trapeze artists performing amazing stunts under the canvas. Children who have only seen animals of the jungle in books and on the screen will be able to see the real thing.

There is a treat in store for them and for their fathers, too, who will be able to think up a hundred and one reasons why he should be elected to take Junior to see his first circus.

The word vegetarian came into use about 1847 when the practice of abstaining from flesh, fish and fowl became fashionable.

WORLD HAPPENINGS
BRIEFLY TOLD

The quinquennial census of the prairie provinces will be taken this year, beginning in June.

In Hayward, Calif., Harold Sexton was arrested for overcrowding his taxi. His payroll: 18 passengers.

A number of houses at Broadstairs, England, were damaged severely by a blast when a sea mine exploded on the beach recently.

Britons who have a plate and a license were authorized for street flying again on Jan. 1. Many areas remain restricted, however.

Fourteen dozen yellow and white chrysanthemums were flown to England recently, the first flowers from the Channel Islands since 1908.

A tax has been found for 30 life-size photographs of Hitler, seized at the German embassy. They'll be used to decorate darts boards in London.

A special award of the defense medal has been made by the King to the Duchess of Kent, in recognition of her services as commandant to the Women's Royal Naval Service.

A royal prayer book written in 1500 was sold for £1,000 (\$4,000) at Sotheby's auction in London recently.

It was once a gift from the King of Navarre to his daughters' governess. Alberta's population has increased by nearly 4,000 during the past year, so nation book statistics indicate.

The greater part of this increase is believed to be due to the return of discharged servicemen.

Strathgilly, Scotland, has no singing telegram, but its men are often sent across the river which separates the post office from this Denver-ness village. When road conditions prevail the story is impassable.

Poultry Pests

The Common Redwing Is Often Troublesome To Poultry

Usually considered only as a pest to man, the common redwing and several other allied species are often troublesome to poultry. Only at night when a blood meal is required, the hags search out their victims, and at other times secrete themselves in cracks and crevices. Small, elongated white eggs are deposited in these hiding places, up to 200 eggs being laid by each female. The young hags produced from these eggs are similar in appearance to the adults but are paler in color, their only food like that of the adults being blood. They can live, however, for several months without a meal. The life-cycle from egg to adult may be completed within six weeks but is often much more prolonged.

One of the simplest and most satisfactory control measures for infested chicken houses is to spray all cracks and crevices in woodwork and roosts with creosote oil or crude petroleum. If complete eradication is desired by this treatment, it should be repeated after about ten days.

Three For Scarf

Such lovely neckwear, this crested scarf—made of lovely, soft, sturdy or plaid. Only 20 make a set of 3—each cloth in string!

These crested scarves, 12 inches in 30-40 inches, 16 inches in string have many uses. Pattern 7332 has directions attached.

To obtain this pattern and twenty cents in extra refund cannot be accepted. To Household After Department, Winnipeg, Newspaper Union, 175 McDermott Avenue E., Winnipeg.

Man. Be sure to write plainly your Name, Address and Pattern Number.

RADAR FOR WHALEERS

Several British whaling expeditions are to be equipped with radar apparatus and means are to be provided for taking bearings on whales both on and below the water.

Consumer is what makes you tell your wife something before she tells you.

WORLD-FAMOUS OVERSEAS ENGINEER IN R.C.—Major Allan Brooks, D.S.O., famed the world over for his bird illustrations and a known ornithologist, who recently died at his home in British Columbia.

Precision Engineering

Machines Designed in Britain For Wartime Purposes

Examples of the skill of British precision engineering which revolutionized war production and which will help to win the United Kingdom's peace production drive were shown for the first time in London. They were seen at the London Exhibition of the United Kingdom Gauge and Toolmakers.

The most striking feature of the exhibition is the number of entirely new machines developed for wartime purposes which can be turned straight over to peacetime production. For example, there is an air operated multiple gauge designed for the highest testing of cannon shells.

The gauge enabled skilled workers to test up to nine hundred shells hourly with dial registering errors of half a thousandth of an inch in each of six different directions. Each of these machines used star facings which have saved ten thousand man hours a year.

Another example of wartime engineering achievement was available for increased peacetime production is a can milling machine built by the Country Gauge and Tool Co. It turns out form millings in one operation to an accuracy of one millionth of an inch in any direction.

Several types of gauges working to the limits of one millionth of an inch are exhibited. One of them records on a loud speaker when the dial is in position for accurate reading.

British precision industry's wartime achievement constitutes one of the most spectacular stories of the United Kingdom war record. Before the war half of the fine measuring instruments used by United Kingdom engineers came from overseas. When the war cut off supplies, the precision industry responded by increasing its output to ten times its prewar volume.

The high quality of British engineering goods is due, to a considerable extent, to the equipment supplied by the precision tool manufacturers. But this equipment is also available for overseas and the London exhibition is being visited by large numbers of precision engineers interested in purchasing the new peacetime machines.

Canadian Authors

A Drive To Establish A Fund To Assist Writers

A drive to obtain an adequate capital endowment for the assistance of outstanding Canadian authors who find themselves in pinched circumstances through age or infirmity is an objective of the Canadian Writers' Foundation.

The Foundation, organized in 1931, was incorporated last year. One of the originators and chairman of the present executive is Dr. Pitham Edgar of Toronto.

In the lifetime of the literary artist, even the man of high genius, neglect and the poverty it engenders are the fate he not infrequently encounters," writes Wilfred Eggleston, literary secretary of the Foundation. "Until 10 years ago, if a Canadian writer fell upon days of adversity when his practice years were over he was entirely at the mercy of such casual or desultory aid as might appear. Since then a national organization has been seeking, modestly at first, more adequately now, to grapple with the problem in a scale commensurate with the need."

At the time the Foundation was organized, the economic depression necessitated a public appeal, but from 1933 to 1934 a small annual appropriation was obtained from the Dominion government. At present there is no government assistance. For 1935, the chief executive officer, Sir Charles G. D. Roberts, whose prose and poetry had done much to make Canadian life known to the nation, people and abroad. Present benefactors include an outstanding poet who is just recovering from a two-year illness, and a novelist who for two years has been ill and unable to see his hands.

OIL WELLS IN BRITAIN

England now has 240 oil wells, producing about half a million barrels of crude oil a year. They were developed during the war by an Oklahoma contractor for the British government.

Since 1906, there have been 21 major earthquakes in Japan, each of which has killed more than 1,000 persons.

WILL VISIT CANADA IN AUTUMN

Rev. Geoffrey Francis Fraser, Archbishop of Canterbury, will visit Canada and the United States next September. It has been announced. He has accepted an invitation from the primate of the Anglican Church of Canada to attend a general synod at Winnipeg, Sept. 4, and from the presiding bishop of the Protestant Episcopal church in the U.S. to attend a general convention at Philadelphia, Sept. 8. This will be the first time an Archbishop of Canterbury has visited Canada.

Seems Very Odd

But Industrial Accidents Often Happen Where People Seldom Go

In a memorandum issued to industry throughout Ontario, R. B. Morley, general manager of the Industrial Accident Prevention Association, comments on accident causes. He says one of the odd things about industrial accidents is the number of men and women who are injured "in the place nobody goes". He cites the case of a man caught on a projecting set screw used in a revolving shaft. The argument against using a safety set screw was that nobody ever went up to the ceiling and consequently could not get caught. Warning industrialists to be doubly careful in "the place nobody goes", Mr. Morley says, "too many are hurt there in just the same way unloading guns have killed too many people."

COMFORT TEMPERATURE

The human body is so constituted that it functions best at temperatures of 60 to 70 degrees for those who wear civilized clothing and at somewhat higher temperatures for unclothed people.

LIFE'S LIKE THAT

REG'LAR FELLERS—Heating Problem Solved

Health LEAGUE presents TOPICS OF CANADA AT VITAL INTEREST

PASTEURIZATION CAMPAIGN GAINS FURTHER SUPPORT

Support for the current campaign of the Health League of Canada which is aimed at obtaining compulsory pasteurization of milk through the nation came recently from two authoritative sources—the Dominion Council of Health and the Parliamentary Voluntary Committee on Health.

At present, Ontario is the only province with compulsory milk pasteurization legislation on its statutes. The Dominion Council of Health, at its annual meeting here, passed the following resolution:

"Be it resolved that the Dominion Council of Health... commend the campaign recently undertaken by the Health League of Canada to encourage the pasteurization of milk throughout Canada."

The Council membership includes the federal and provincial deputy ministers of health.

The Parliamentary Committee approved the following resolution:

"Resolved that this Voluntary Committee on Health of members of the Senate and House of Commons go on record as expressing the opinion that the Dominion Council of Health is in the interest of the Canadian people. That as this matter does not come within federal jurisdiction we express the hope that the provincial governments will again consider the possibility of enacting legislation to enforce pasteurization."

A Favored Country

Canadians Should Realize What They Have To Be Thankful For

A St. Marys resident was heard to say on the day after the New Year holiday, that he was literally fed up on too much turkey, dressing, plum pudding and mince pies and that he would be glad when the last of the food were eaten up and the ordinary not-so-rich fare was substituted. There are not many in this district who fared as well, as all kinds of food and other good things were in abundance here as those families had as many as four turkeys to spread over the two holiday periods. To those who have just come home from Europe, it was a great time of feasting, of good cheer and good fellowship, but in the back of one's mind there has always been the thought that countless thousands across the Atlantic were having less to eat than over in the days of desolation after the Second World War. The thought that the people of Canada can be thankful for but probably the greatest is this wealth of food and food which we enjoy, even with the rationing restrictions in force.—St. Marys Journal-Argus.

WHAT OIL FIELDS ARE

One of the world's actual are oil fields of animals and plants which have been subjected to millions of years of heat and pressure beneath the earth's surface.

By Fred Neher

Week's Ration Fashion for a family of four

SUN.	MON.	TUES.	WED.	THU.	FRI.	SAT.
Roast Lamb	Curry of Lamb	Vegetable-Egg Scallop Pie	Beef-steak & Kidney Pie	Frankfurters	Flah Dish	Stuffed Flank Steak
Group B	left-over roast	unrationed	Group B	Group E	unrationed	Group B
3 lbs.		1/4 lb. beef round (kidney used)	1 lb.		1 lb.	1 1/2 lbs.
2 coupons		4 tokens	3 tokens			1 coupon
1 token for 6 ounces of cooked meats						

The family's penchant for a Sunday roast could be pleasantly met by a three-pound rolled shoulder of lamb.

A tempting remark for Monday would be a tasty lamb curry. Aside from this, you may have some useful odds and ends for luncheon sandwiches. A vegetable-egg scallop can appetizingly and satisfactorily solve the problem of a meatless meal for Tuesday. Just alternate larders of the family's favorite vegetables, hard-boiled eggs, and favorite cheese sauce, top with buttered crumbs, and oven heat until bubbling and browned. Good companions for it would be hot seconds and a crisp cabbage salad. Steak and kidney pie on

Wednesday is an excellent dish to lastfully and satisfactorily satisfy winter appetites. For Thursday, pump frankfurters, along with asparagus and jacket boiled potatoes, are suggested for appealing thrills. And on Friday unrationed fish, done to your liking, will bring the goodness of the sea to your table. A flank steak encircling a savory dressing will take care of Saturday's dinner. It should leave you with a comforting something to tuck away in the ice box. You may care to devote the remaining token of the week to 6 ounces of cooked meats for luncheon menus, or to augment the cold sliced flank steak for Sunday supper.

Train Pipes

Poles Were Taught To Play The Bagpipes

The Pictou-based Society of Scotland helped train 93 Canadian army pipers during the war, in courses given at Edinburgh Castle.

Pipe Major William Ross, M.B.E., retired Scottish bagpipe instructor, taught 713 pipers from British Dominions and even Polish forces during the last six years.

Canadians who attended more than one course on the finer points of pipecraft, included Pipe Majors Eason, Vancouver; Neil Sutherland and Malcolm MacKinnon, Calgary; and Sgt. Armstrong, all of the Seniors Highlanders of Canada; Pipe Major D. Sutherland, Canadian Black Watch; Pipe Majors Duncan and Scott, Cameron Highlanders of Ottawa; and Pipe Major Noble, Argyll and Sutherland Highlanders of Canada.

There are more than 130 species of trees in Canada.

Something Universal

Back Seat Driver Is Not Peculiar To Any Country

Sometimes it seems that the Russian people are as remote from our understanding as they are from our sight. For example, it must have seemed odd, if admissible, to many Canadians that a Russian husband and wife should have bought a tank with their own money, operated it in Poland, Czechoslovakia and Germany, and killed 160 enemy soldiers. But if the Canadians read to the end of the story, they would have found that the husband did the driving and the wife did the bombing. The back-seat driver, then, is a Russian invention too. Knowing that, we somehow feel that world brotherhood is a possibility after all.—Kitchener Record.

PLANNED REFORMS IN ASIA

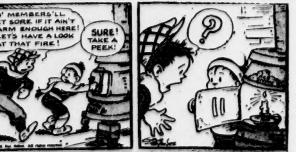

The British took the island of Cyprus from Turkey in 1878 as part of a plan for the introduction of reforms in Asia Minor.
